

Fabric and TDM Services

Deployment Overview

Luc Clément
Director, Cloud and Platform Services

Multiple Management Options

From fully managed, Self-managed, and Hybrid,
on GCP/AWS/Azure Cloud Providers and On-premises

SaaS Managed on K2cloud

K2view Fabric and TDM Services are hosted and managed for a customer by K2view.

A customer's environment and data is fully segregated and secured.

Dedicated connectivity to customer-hosted and managed data sources and targets.

Self-Managed Cloud/On-prem

K2view Fabric and TDM Services are hosted and managed by a customer within a customer-owned environment in the Cloud or on-premises.

Hybrid Cloud/On-prem

Distribute K2view Fabric and TDM Services across Cloud and on-premises environments.

Choose when and how data moves from an on-premises environment to the Cloud.

K2cloud Components

- **K2cloud Orchestration Platform:** Creates, controls, and monitors Fabric and TDM.
 - Manages projects, sites, and spaces
 - Instructs K8s how to create spaces
 - Simple to use UI for provisioning Fabric and TDM on a Kubernetes cluster in the Cloud or on-premises
- **Kubernetes (K8s) Cluster:** where K2cloud spaces are deployed for development, integration testing, or production
- **Clusters:**
 - Studio for development
 - Production Fabric / TDM Application
 - Integration Testing / Staging – a best practice
- **Git:** used for development, build, and deployment to target environments

K2cloud Deployment Options

- K2cloud offers full-managed SaaS, self-managed/hosted, or hybrid deployment options.
- Available on GCP, AWS, and Azure or on-premises.
- K2view offers a uniform approach to deployment, infrastructure, behavior, and service lifecycle.
- Whether deployed on the Cloud or on-premises, services function identically.

K2view Fabric and TDM Deployment Options

On-Prem/Cloud

Self-Hosted and Managed Deployment

Environments:	Dev	SIT / Staging	Prod
Studio for Devs:	Docker Compose / Podman		
Fabric Services:		VM	VM
Offers and Requires:	Customer-managed provisioning, installation, upgrades, SSO, and monitoring of Docker Compose or Podman, and VM resources Requires: Integration with data sources and targets		

Cloud-Managed K2cloud Kubernetes (K8s) Deployments

Environments:	Dev	SIT / Staging	Prod
Studio for Devs:	K8s		
Fabric Services:		K8s	K8s
Offers and Requires:	Customer-managed provisioning and installation of On-prem/Cloud K8s environments, upgrades, and SSO config K2cloud Orchestrator: automated deployment/creation of On-prem/Cloud K8s environments, upgrades, identity federation/SSO, and monitoring Requires: (Cloud Manager only) Access to cloud.k2view.com - Customer-managed Git source control - Integration with data sources and targets		

K2cloud SaaS – a K2view Managed Service

K2view Managed SaaS

Environments:	Dev	SIT / Staging	Prod
Studio for Devs:	Serverless K8s		
Fabric Services:		Serverless K8s	Serverless K8s
Offers and Requires:	K2cloud Orchestrator and Serverless Services - K2view-managed and provisioned environments - K2view-managed automation, upgrades, identity federation/SSO, and monitoring Requires: - Access to cloud.k2view.com - Customer-managed Git source control - Customer-managed integration with data sources and targets

Quick Tour

K2cloud Orchestrator

K2cloud Fabric Web Studio

K2cloud Space Administration

The screenshot shows the K2cloud admin interface. The browser address bar displays 'lc360-k2view.k2rnd-4.cloud.k2view.com/app/admin/interfaces'. The navigation bar includes 'k2admin' and tabs for 'Processes', 'Objects', 'Security', 'Commands', 'Terminal', and 'Configuration'. Below the navigation bar, the 'Interfaces' tab is selected. The main content area shows 'Admin > Interfaces' and a table of interfaces.

	INTERFACE	TYPE	STATUS
...	ASSET_DB	SQLite (Db)	OK
...	BILLING_DB	SQLite (Db)	OK
...	CRM_DB	SQLite (Db)	OK
...	localFileSystem	LocalFileSystem	OK
...	projectHome	LocalFileSystem	OK
...	share	LocalFileSystem	OK
...	workspace	LocalFileSystem	OK

Offered as a SaaS Managed Service

Deployed as a Customer Self-Managed Service
