

FABRIC V8.3.0 HOT FIX 3 RELEASE NOTES

These Release Notes describe the new features in Fabric release V8.3.0 HF3 and list bugs that have been fixed since the V8.3.0 HF2 release.

Certification of this Fabric release is based on:

- Cassandra version 4.1.8
- SQLite version 3.46.1
- OpenJDK Runtime Environment 21.0.4+7
- Confluent Kafka version 7.9.2
- Neo4j enterprise 5.26.13
- Elasticsearch 8.5.3
- AWS OpenSearch 1.3.4
- PostgreSQL 17.5

RESOLVED ISSUES

- Ticket #45677 – introducing performance improvements to the masking mechanism.
- Ticket #45891 – fixing the IIDFinder process that crashes when consuming messages from MSK due to a missing 3rd party library JAR.
- Ticket #45660 – improving the discovery process to correctly present the Aerospike database in Catalog.
- Tickets #45657 and #45658 – fixing an issue where the custom Catalog plugin did not execute when *Connect to Source* was set to *False* in the Discovery pipeline.
- Ticket #45612 – adding support for special data types in BigQuery, such as STRUCT, ARRAY, and JSON.
- Ticket #45885 — supporting OCI Object Storage (S3-compatible) by adding a new hidden parameter to the config.ini file, under the [s3_storage] section. The parameter is called CHECKSUM_VALIDATION (default value is *True*) and it controls S3 payload signing. Setting it to *False* disables the checksum validation.
- The AD/LDAP authenticator supports a configurable login attribute (cn and/or sAMAccountName) through the username_attribute parameter, enabling LAN ID sign-in without requiring directory changes.

https://support.k2view.com/Academy/articles/26_fabric_security_iam/13_user_IAM_configuration.html#ad-ldap-login-attribute-selection

- Resolved 3rd party security vulnerabilities.
